

[ges](#). For this purpose, PHP code is embedded into the [HTML](#) source document and interpreted by a [web server](#) with a PHP processor module, which generates the [web page](#) document. As a general-purpose programming language, PHP code is processed by an interpreter application in [command-line](#) mode performing desired operating system operations and producing program output on its standard output channel. It may also function as a graphical application. PHP is available as a processor for most modern web servers and as a standalone interpreter on most [operating systems](#) and [computing platforms](#).
